

Experiment 1: step-wise stance coefficient stability

Agreement movement

Largest shift: + current-turn duration ($\Delta\beta=-0.051$)

Disagreement movement

Largest shift: + current-turn duration ($\Delta\beta=+0.050$)

1. Stance movement only
2. + lagged stance movement
3. + previous iceberg ratio
4. + timeline position
5. + category fixed effects
6. + current-turn duration
7. + pre-turn gap and overlap
8. + previous-turn duration
